320-815-5791**PRESIDENTIAL STATE OF THE HILL ADDRESS:**

Greetings to all Heritage Hill members! We are only a couple weeks away from the show! I couldn't be more excited. Having everything come together is one of my favorite parts of this whole thing. The hard work put in by all the members each year is always great to see. We couldn't put on a show every year without the commitment from many of you. Thank you for your time and manpower to get things done! I know there has already been tons of work out at the show grounds in preparation for the show, but there is still a lot more to do. If anybody needs help setting up a display or cleaning a building or anything, please contact a board member so we can round up enough hands to get the project done. There is always stuff that needs to be accomplished, so please ask for help to get things done in a timely manner. I know I, and many others, will be there a few days before the show weekend to help with whatever.

Update on my 6hp Nelson brothers engine; ITS ALIVE! After many hours of work, it is finally running. I ended up rebuilding the points on the igniter, as mine were very worn. Flywheel supply out of Craig, Iowa supplied all the parts I needed to run. The homemade magnet charger worked well, or at least I think it did. The magnets are definitely stronger than they used to be, but it still isn't throwing good enough power to spark the igniter as good as it should. I have had it running with a battery and coil setup, and that is just fine to get me by for now. Total magneto restoration will need to be implemented soon, but as for now we will let it run on a coil for the show. The engine runs very smooth and slow. It seems to be very healthy with tons of life left in it! We had a slight mishap during this last weekend though. After running for a few hours, the head gasket decided to pack up and leave. Mr. Nelson burned a hole right through it, and that caused water from the cooling hopper to leak into the cylinder, yuck! A couple hours later, a sheet of gasket paper, an x-acto knife, and some copper coat gasket sealer the new head gasket was installed and looking better than ever. I finished the installation right before the membership meeting, so I didn't have time to run it. Hopefully the new gasket holds! It is always fun working on these old engines, you never know what interesting loop they will throw you for. There always seems to be some odd problem or whatnot that causes it to not run. Practice makes perfect, and every time I wrench on this old iron, I learn something new. Stop by the Powerhouse building during the show to check it out!

I cannot wait to see everybody at the show. It is coming ever so soon.

**Best regards, Grant Schmieg**
